If NO period for reply is specified above, the maximum statutory period will apply and will expire 6 MONTHS from the mailing date of this communication.

Application/Control Number: 10/764,125

Art Unit: 3766

#### **DETAILED ACTION**

#### Election/Restrictions

Applicant's election with traverse of group VI in the reply filed on 10-17-2006 is acknowledged. The traversal is on the ground(s) that there is no serious burden on the examiner. This is not found persuasive because the examiner will be searching multiple inventions and multiple claims.

The requirement is still deemed proper and is therefore made FINAL.

Claims 1-42, 69-88 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected invention, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in the reply filed on 10-17-2006.

### Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 43-48 are rejected under 35 U.S.C. 103(a) as being unpatentable over Little et al "physiology of the Heart and Circulation. Little et al shows a number a parameter values including figure 7-15 page 187 wherein the ratio of systolic muscle tension (myocardial characteristic) to ventricular pressure (cardiac characteristic) or alternatively Ventricular pressure (cardiac

**Art Unit: 3766** 

characteristic) to muscle length (myocardial characteristic) is plotted as a parameter value graph. The parameter also shows wellness of the patient in terms of fatigue. Lines 9 (i.e. a-b) depict differences of the measured parameters at different points in the cardiac cycle shows how applicant's parameter are related for determining the wellness of a patient when injected ionotropic drugs. To have measured these properties and formed a ratio to generate the curve shown would have been obvious.

## Allowable Subject Matter

Claims 49-68, 89-99 are allowed.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mark W. Bockelman whose telephone number is (571) 272-4941. The examiner can normally be reached on Monday - Friday 10:00 to 6:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Robert Pezzuto can be reached on (571) 272 -6996. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Art Unit: 3766

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
